June 2022

Portfolio manager's commentary

Portfolio trimmed losses despite volatile month

Following a tough start to the year, capital markets continued to struggle in June and over the quarter. Over the month, volatility remained elevated across stocks and bonds as global growth concerns mounted, alongside ongoing inflation risks. Policymakers turned more hawkish as inflation rates continued to climb. Also, rising prices and borrowing costs have started to squeeze consumers, raising recessionary fears. Nevertheless, consensus analyst forecasts surmise growth in company profits for this year.

The portfolio pared back losses to end the month positively in relative terms.

In Equities, we added the S&P 500 Equal Weight Technology ETF to the portfolio. The broader technology sector has sold off heavily recently and this rotation has not been homogenous. The S&P 500 Information Technology Index has outperformed the S&P 500 Equal Weighted Information Technology Index by 30% since May 2019, up to which point the two indices had moved very much in lockstep. As the gap has started to close, we sought an interesting opportunity to be exposed to the smaller capped companies as they catch up on a relative basis. We financed this purchase through the sale of Salesforce.com.

We also introduced Sonova to the portfolio to further bolster our holdings in healthcare. Sonova is the market leader in hearing care solutions, demonstrating high cash generation and benefiting from attractive long term growth drivers. To finance this purchase, we trimmed Amazon.com. Whilst it remains a core position, we believe the stock could suffer from slower demand in general retail. We also reduced the iShares MSCI EMU ETF.

Finally, we decided to take profits on half of our equity hedge. We took 85% profit on the position and decided to crystallise some of these gains in the current environment.

Remarks

• The ESG track record and the MSCI ESG Rating measure how well a company performs on environmental, social and governance issues compared to other companies (peers) in the same industry. The importance of the 3 different factors varies by industry. Companies with a below average ESG track record / MSCI ESG Rating are considered riskier since they are more likely to be impacted by factors such as controversies, new social and environmental regulations, bad reputation, litigation risk, poorly motivated work force and financial mis-management.

• The Carbon Exposure Risk measures the probability and severity that a company is negatively impacted by climate change. Climate change exposure can be physical, for example through extreme heat or flooding, policy related, for example through the introduction of a carbon tax, or technological, for example through competitors developing greener products. The risk is a function of the company's exposure to climate change and of how well the company is managing that exposure.

• The CO₂e Sales Intensity measures how much CO₂ equivalents are emitted by a company per USD 1 million sales in the most recent reporting year as reported by MSCI ESG Research. The emissions are direct emissions generated by sources owned or controlled by the company and those from the generation of purchased energy.

• The ESG distributions in the charts exclude money market and derivative positions such as foreign currency forwards.

Important information

All performance data refers to share class Acc X.

Source: Rothschild & Co and Bloomberg

Sharpe ratio: Sharpe Ratio is the statistical measure of excess portfolio return over the risk-free rate relative to its standard deviation.

Annualized Volatility: Annualized Volatility is the measure of return dispersion for an asset over twelve month since inception.

Maximum Loss: This is the largest monthly drop in the portfolio's value during a given period. It is expressed as a percentage and reflects the fall in value during the time between the draw down peak (highest value) and the drawdown valley (lowest value).
