Fund manager's review

Global stock markets reached new highs in the third quarter, with broader participation across industry sectors compared with the tech-driven rally seen earlier in the year. Overall sentiment remained positive with central banks reducing interest rates, despite some mixed messages about the economic outlook.

PORTFOLIO PERFORMANCE

The portfolio ended the quarter positively and 2024 has been a positive year overall. Our asset allocation strategy, including an overweight position in equities and underweight in money markets, has proven effective. Additionally, our decision to lengthen duration in fixed income since last year has yielded favourable results. However, Q3 presented significant challenges, particularly in terms of security selection while the sector and regional calls in equities produced mixed results.

The stock selection was especially challenging due to some of our high conviction stocks facing some headwinds from either politics (such as Alphabet or ASML) or from general market skepticism (for example, Adobe). The difficult environment for our active selection was most pronounced in the Technology, Consumer Discretionary, and Communication Services. While our stock picks had previously offset the absence of high-performers (Nvidia) up until the end of Q2, this was no longer the case in Q3. The broadening of the market affected our portfolio, as previous drivers of performance like ASML and Alphabet became drags. Despite these challenges, we remain committed to our investment philosophy towards good quality business that have pricing power and can improve their competitive position within their industries during times of economic stress.

Turning to single stock performance, GE Aerospace (19%) was among the top performers this quarter as it continued its trend of exceeding expectations with orders and revenue growth remaining robust, driven by high demand for aeroplane engines and

spare parts. Additionally, sustained recovery in post-pandemic air travel and supply chain constraints in the broader industry, which increased demand for GE's products benefitted the company's performance. The market increasingly recognised GE Aerospace's strengths: Growing appreciation for the company's prospects as a pure-play aerospace business and a positive outlook on the company's ability to capitalise on industry trends.

Veralto's (18%) financial performance results, released in Q2, set a positive tone for stock performance this quarter with the market adjusting their expectations favourably to the company's strategic initiatives and forward-looking guidance. Furthermore, the company benefited from the market broadening trend.

On the other hand, some of our high conviction names found themselves at the end of the detractors, ASML (-20%) and Alphabet (-21%). Several factors influenced ASML's volatile performance, quarterly guidance came in below consensus estimates which spooked investors; concerns were raised surrounding geopolitical risks, particularly related to China sales and the stock suffered from the market's uncertainties on the semiconductor industry's cyclicality. Nevertheless, in broader context, the stock has demonstrated strong performance over a longer timeframe, year to date the stock is up almost 40%.

Alphabet also experienced downward revisions to its earnings estimates. Additionally, YouTube's ad revenue growth slowed down, partly due to increased competition in the Connected TV ad market. The company's core search business, while

Fund manager's review (continued)

still robust, faced challenges from emerging AI technologies. Despite strong overall financial performance and AI-driven innovations, investor concerns about stretched valuations and market concentration in tech stocks led to a sell-off.

Meanwhile, the fixed income market delivered another strong quarter: the Federal Reserve delivered its highly anticipated first cut. They kickstarted it with a 50bps cut declaring victory over the inflation fight with a further 75bps of cuts are currently priced before the year end. Furthermore, the 2Y10Y spread have flattened, widening around 15bps. Credit spreads have marginally tightened across the curve, both in the investment grade and high yield space, further supporting performance. We continue to favor a barbell approach in our positioning, owning high-quality paper combined with an element of higher yielder on the shorter end of the curve.

PORTFOLIO ACTIVITY

In July, we adjusted the portfolio with the addition of the iShares MSCI Global Semiconductors ETF, reflecting the semiconductor industry's significant market presence. This move was financed by selling the MSCI World Health Care ESG UCITS ETF.

August saw the addition of a new equity hedging product to the portfolios, replacing the previous hedge that expired in June 2024. This decision was made due to attractive volatility levels, mixed inflation across regions, and market expectations of future interest rate cuts.

No trades were undertaken in September.

Fund performance

At the end of the third quarter 2024, the performance stood at 4.3% QTD and 8.8% YTD.

Notes

At Rothschild & Co Wealth Management we offer an objective long-term perspective on investing, structuring and safeguarding assets, to preserve and grow our clients' wealth.

We provide a comprehensive range of services to some of the world's wealthiest and most successful families, entrepreneurs, foundations and charities.

In an environment where short-term thinking often dominates, our long-term perspective sets us apart. We believe preservation first is the right approach to managing wealth.

Important information

All performance data refers to share class Acc X.

Source: Rothschild & Co and Bloomberg

Sharpe ratio: Sharpe Ratio is the statistical measure of excess portfolio return over the risk-free rate relative to its standard deviation.

Annualized Volatility: Annualized Volatility is the measure of return dispersion for an asset over twelve month since inception.

Maximum Loss: This is the largest monthly drop in the portfolio's value during a given period. It is expressed as a percentage and reflects the fall in value during the time between the draw down peak (highest value) and the draw down valley (lowest value).
